Table of Contents

Table of Contents 3
List of Figures 5
List of Tables 9
List of Acronyms 12
Introduction 17
The idea of Natural Language Addressing (NLA) 19
Brief overview of the content 28
1 Theoretical surroundings 32
1.1 Basic mathematical concepts 32
1.2 Hashing 35
1.3 Tries 38
2 Storing models 43
2.1 Storage model and Data model 44
2.2 Memory management and access methods 46
2.3 Interconnections between raised access methods 48
2.4 Structured data models 53
2.5 Semi-structured data models 53
2.6 Graph models and databases 54
2.7 RDF databases 62
2.8 Multi-layer representation of graphs 73
2.9 Multi-domain information model (MDIM) 78
2.10 Multi-domain access method “ArM32” 82
3 Access method based on NL-addressing 87
3.1 Example of NL-addressing via burst tries 87
3.2 NL-ArM access method 90
3.3 Example of NL-storing the Sample graph 92
4 Basic experiments 96
4.1 Comparison with a text file 96
4.2 Comparison with a relational database 103
5 Experiments for NL-storing of small datasets 114
5.1 Knowledge representation 114
5.2 Experiment for NL-storing dictionaries 117
5.3 Experiment for NL-storing thesauruses 119
5.4 Experiment for NL-storing ontologies 130

6 Experiments for NL-storing of middle-size and large RDF-datasets 151
6.1 Experimental storing model 151
6.2 Experimental storing algorithm 154
6.3 Estimation of experimental systems 157
6.4 Experiments with middle-size datasets 168
6.5 Experiments with large datasets 183
7 Analysis of experiments 192
7.1 Analysis of basic experiments 192
7.2 Analysis of experiments with structured datasets 194
7.3 Analysis of experiments with semi-structured datasets 194
7.4 Storing time and multi-processing 199
8 Practical aspects 206
8.1 The transition to non-relational data models 206
8.2 Building and using of ontologies 209
8.3 Building RDF-stores using NL-addressing 213
8.4 ICON - Instrumental Complex for Ontology designatioN 215
Conclusion 223
Big Data 223
BigArM 224
Collect/Report Paradigm 225
Main results presented in the monograph 229
Appendix A: Program Realizations 235
A1. WordArM 236
A2. OntoArM 242
A3. RDFArM 247
A4. Results from experiment with simulating parallel processing 251
A5. Results from experiment with 100 millions triples 256
A6. Instruments for the programmers 263
A7. ICON Ontological editor 268
A8. Sample layers in ICON 271
Appendix B: Brief descriptions of the main mentioned tools 273
B1. Protégé 4.2 273
B2. SPARQL 282
B3. Storage characteristics of analyzed RDF triple stores 284
